

RAC Attack: How Can Hospitals Guard Against Medicare Reimbursement Loss?

By Richard Lewis
Manager, Health Care Group
Moss Adams LLP

One of the biggest high-wire acts for hospital administrators and executives today is ensuring that the clinical documentation supports the services coded and billed. Why is this important? Because, to put it simply, Medicare revenue retention is directly tied to hospitals' clinical documentation quality and coding accuracy.

The permanent Medicare Recovery Audit Contractor (RAC) program was rolled out throughout the nation in January 2010. Since then,

most hospitals have experienced automated and complex reviews pertaining to suspected coding and billing errors. In August 2010 three of the four RAC contractors received Centers for Medicare & Medicaid Services (CMS) approval to review as many as 29 Medicare Severity Diagnosis Related Groups (MS-DRGs) for medical necessity.

This is just the beginning. RACs have already received approval to review the coding for over 500 of the 746 MS-DRGs. At this point it's more a question of what the RAC won't be reviewing, not what they are reviewing.

The Medicare RAC demonstration project, conducted between 2005 and 2008, centered around three key states (Florida, New York, and California) and returned over \$1 billion to the Medicare Trust Fund. Despite the staggering total, and questions about whether the RACs were overzealous, the key point is that almost two-thirds of the \$1 billion in take-backs were for care determined to be not medically necessary or provided in the wrong setting.

During the winter of 2009–2010,

CMS raised the maximum number of records RACs could request during each 45-day period. Starting in the early months of 2010, providers braced themselves for an onslaught of RAC requests for medical records to conduct complex coding audits. Much to their surprise, the number of requests

Letter from the Publisher and Editor

Dear Reader,

The California Healthcare News maintains a very active Facebook page. We scour the internet and post links to articles of interest to professionals in the California healthcare industry. We also post job openings and articles from the California Healthcare News web site.

Facebook users can “Like” our page and receive updates to their own pages as we make them to ours.

Many people have asked why we’re so bullish on Facebook when our reader demographic is a “seasoned” one. After all, aren’t Facebook and the other social networks for the young? Absolutely not!

According to iStrategyLabs.com, an organization that has been tracking Facebook growth since October 2007, from 01/04/09 to 01/04/10 more people in the 35-54 age range used Facebook than any other age range. The 29,917,640 U.S. Facebook users in this demographic represented a 328.1% increase over the prior year.

To see our page, visit cahnews.com and click on the Facebook icon.

Until next month,

< RAC, from P1

rarely met the maximums set by CMS and, in many cases, providers didn't receive a request during each 45-day period.

There was a lot of speculation as to reasons for the limited activity from RACs in early 2010. Like most providers, RACs faced challenges when developing new programs and offering new services, including recruiting skilled health care professionals and developing efficient processes and procedures. Instead of incurring inefficient and unnecessary expenses to review only half of the equation (coding), RACs used their time wisely, testing out their data-mining tools and reviewing limited records while seeking CMS approval for the medical necessity audits.

As everyone in the hospital industry knows, these medical necessity determinations can be an excruciatingly complicated process. The margin for error is slim, and mistakes can be extremely expensive. Even minor errors can cost a provider millions of dollars. So it's essential to remember that the key focus of the initial medical necessity reviews is on whether the clinical documentation supports medical necessity for the setting billed.

For example, short stays, primarily one-day stays during which services could have been provided on an

outpatient basis (such as observation), will be carefully scrutinized. The most basic elements of the medical record, admission orders, are also being reviewed carefully. Was the physician's admission order properly worded and documented? Without a proper physician order for inpatient admission, the claim isn't qualified to be paid as an inpatient admission. The risks are huge, because the RAC could recoup the entire amount paid to the facility for the inpatient admission.

But even though revenues are absolutely crucial here, the cost of coding and billing (wrong setting) errors extends well beyond dollars and cents. In some cases, honest confusion about certain codes or differing interpretations about the proper setting and coding can lead to wrongful government accusations of fraud and abuse—as well as significant loss of well-deserved reimbursement. Therefore, internal and external audits should be regularly performed to ensure the quality and accuracy of the clinical documentation to support the coding and the medical necessity of the setting billed.

CMS will likely continue to expand the number of MS-DRGs that RACs can review for medical necessity, and hospitals figure to be peppered with a steady stream of government requests for data and

records that can explain and justify standard and basic patient care.

In addition to fighting the good fight, hospitals need to continuously improve the quality of their clinical documentation to support inpatient admissions and length of stay. The best defense—and the best way to get rid of RACs—is to code and bill consistent with clinical documentation in the proper setting.

It's important to note that RACs are paid on a contingent fee basis. Simply put, medical necessity validation reviews are where the money is for the RAC. And medical necessity denials are lucrative because, in many cases, the RAC recovers 100 percent of the Medicare payment.

It's well worth considering some of the approaches touched on in this analysis to make sure the government's Medicare reimbursement audits don't eat up precious time, energy, emotion—and revenues.

Retirement Plan Management: Another Layer of Disclosure Required for Defined Contribution & Defined Benefit Plans

By William Small

*Principal
Highland Capital Advisors*

It is no surprise to healthcare employers that the operation of qualified retirement plans have become both more simple, and more complicated. Simplification has come through products, technologies and changes to regulations that support easier design, implementation and maintenance.

More complicated through increased demands on employers, plan sponsors and staff to measure and manage the direct and indirect expenses of the Plan. Some of these changes stem from regulation, some from new legislation and some from changed behaviors in the marketplace by decision makers and vendors.

2009 – Year of the Audit

For many retirement plan sponsors, 2009 was the “year of the audit” as most 403(b) plans with over 100 participants became subject to an annual plan audit and IRS tax filing for the first time. Concurrently, many such plans became subject to the provisions of ERISA, the watershed retirement plan law originally passed in 1974.

2010 – Year of Disclosure

Recently released final regulation under §408(b)(2) from the Department of Labor make 2010 the

“year of disclosure” which layers an additional level of obligation upon plan sponsors and their management. The new regulation was released on July 15, 2010, with an effective date that will apply to existing service arrangements as of July 16, 2011. In other words, your current plan compensation must be accounted for beginning next July. The long lead time is reflective of the depth and detail of the new regulation and is intended to accommodate the costs and burden of transition to a new disclosure scheme.

Because the new regulation is interim as well as final, additional requirements may be added prior to the effective date.

The new regulation applies to both defined contribution and defined benefit plans, although some provisions only apply to those which provide participant direction of investment accounts. The new regulation focuses on the disclosure of direct and indirect compensation received by certain service providers that expect to receive at least \$1,000 in compensation and that provide:

- Fiduciary or registered investment advisory services;
- Recordkeeping services;
- Brokerage services; or

- Certain other services for which indirect compensation is received.

Disclosure Requirements

Plan service providers are required to provide information in writing to the plan fiduciary (usually the plan sponsor). The rule does not require a written contract delineating the vendor’s disclosure obligations, but we think best (or at least adequate) business practices suggest you require it of your providers.

Information that must be disclosed in the vendor’s written disclosure includes:

- A description of the services to be provided;
- All direct or indirect compensation to be received by the service provider, its affiliates or subcontractors;
- Detail on “bundled” arrangements where compensation is internal and not explicitly spelled out (as in the case of an insurance company or mutual fund with internal payments to funds, administrators, brokers, etc.);
- Service provider disclosure as to whether they are providing any services as a fiduciary to the plan; and

- Disclosure about plan investments. This obligation is placed upon both fiduciaries and on recordkeepers and brokers who facilitate the investment in plan options through administration platforms or other pooled mechanisms.

Impact & Action

There are significant differences between the New Schedule C to the Form 5500 Annual Report and supporting audit. First, there is no de minimis exemption for plans with fewer than 100 participants; second, the new regulation expands the obligations of plan sponsors dealing with vendor contract provisions and “reasonableness” of such provisions. The primary purpose of the regulation is to ensure that plan fiduciaries are provided with the information they need to prudently select and moni-

tor service providers. This is part of a broader initiative by the DOL to increase the transparency of fee arrangements.

Noncompliance under the regulation may result in a violation of ERISA and an excise tax imposed under IRS code. Brokers, auditors and bundled service providers are scrambling to deal with this new regulation.

Stepping back from the tactical elements of these requirements, the net effect to most sponsors is a disruption of the mud at the bottom of the retirement plan pond. The time has come for every responsible sponsor to understand the nuanced issues surrounding fees, types of investment providers, etc. that have been ignored by many for far too long.

As consultants and advisors, Highland is helping plan sponsor clients

deal with the new regulation. Key issues: a) how to gather and collate the required data; b) development of policy and process to determine what is “reasonable” compensation for services provided; and c) implementation procedures to conform with all requirements – driven by both ERISA and IRS regulations and by professional best practices.

For a complimentary analysis of your organization’s risk profile and remediation options, give the author a call.

Considerations for Acquiring or Affiliating with Another Hospital

By Tanya K. Hahn

*Senior Vice President
Lancaster Pollard
and*

Mike Johns

*Vice President, Finance Practice
Quorum Health Resources*

The economic downturn and resulting restricted access to capital have caused many hospitals to consider a partner or other affiliation strategy. Declining volumes and the deteriorating payer mix are further forcing these discussions – as are the seemingly countless opportunities for capital-rich hospitals to acquire struggling, undervalued hospitals.

Recent healthcare reforms may have a further impact on hospital affiliation. In fact, a recent Moody's report predicts that "as governmental auditing and oversight of revenue are tightened, hospitals will be pressured to operate more efficiently, forcing spending cuts and mergers among smaller hospitals after 2014." Affiliating or acquiring may be the right thing to do, but before taking such a step, there are some considerations for both parties.

From the perspective of the hospital needing a partner, the board must consider a continuum of control. At one end of the spectrum is an affiliation that simply calls for cooperation between the hospitals

for mutual benefit, and virtually all control is maintained by the hospital seeking a partner. At the other end of the spectrum is the acquisition of one facility by another, and all control is surrendered to the acquiring facility. In between are management agreements, clinical affiliations, lease transactions, and more formal partnerships with legal and financial commitments by each party.

Consideration should also be given to the benefits provided by the other party.

- If capital needs are driving the decision, then the acquiring facility's balance sheet strength should be evaluated. Will they be able to provide the capital needed for the coming years?
- If expanding the hospital's market is the objective, will the partner provide complementary service lines, a desired brand name and reputation, and a different ability to recruit physicians?

Another consideration is whether the acquiring hospital or system has successfully acquired other facilities. Merging two cultures and achieving synergies are not always easy or successful. Facilities with a successful track record of achieving these objectives are more likely to be successful again.

Debt Factors

Most debt structures have broad provisions for mergers and acquisitions, and they often require bondholder or lender approval prior to such a transaction. Reviewing the debt documentation is a key first step in proceeding with any affiliation/merger discussion.

Hospitals must understand what corporate entity is obligated in the outstanding debt of the hospital being brought in, usually known as the Obligated Group. A debt obligation may be supported by both a hospital and its physician practice group. The merger/affiliation, however, may be desired with the hospital only. Understanding the assets or collateral the hospital owns and the debt it can support without the physician practice group is important to knowing how it might be able to refinance or restructure existing debt. In addition, the acquiring hospital/system may have limitations on its ability to restructure its Obligated Group and must understand current refinancing limitations on its own debt before proceeding with the merger/affiliation.

My Debt is Your Debt

A hospital with outstanding letter-of-credit-enhanced debt may see its debt structure improved by affiliating with a partner that brings a stronger financial position or

banking relationship to the table. The LOC may be able to remain in place, saving both hospitals the time and cost of refinancing. Further benefits can be realized if the acquirer has a significant banking relationship with the enhancement provider.

HUD/FHA Section 242 mortgage-insured loans are assumable by acquiring hospitals, with approval from FHA, and they remain non-recourse to the affiliation/acquiring hospital. The current limitations on transfers are not overly burdensome and should not be viewed as a deterrent to the affiliation/merger. FHA-insured loans can be assumed by either nonprofit or for-profit hospitals.

USDA direct loans may be assumable depending on the acquirer or affiliation partner. USDA financing is limited to nonprofit hospitals that are rural and that cannot access other means of capital. If an affiliation changes any of these features, then the USDA financing would most likely have to be refinanced. If the partner is a similar-sized rural nonprofit, then assuming the debt may be negotiable.

If a hospital is considering a new debt instrument and is also considering a future affiliation/merger, it should proactively consider future flexibility. Potential negative implications of a merger/affiliation can be minimized or eliminated through active management of debt covenants and prepayment requirements within the financing documentation.

Lastly, as organizations consider a merger/affiliation, they must evaluate the impacts of such a transaction on the investment portfolios of each as well as any interest

rate mitigation contracts such as swaps, caps or collars on the new combined entities. Often these contracts will also include provisions related to mergers/affiliations, which may impact the ultimate decision and/or timing of the transaction. A comprehensive balance sheet analysis needs to occur along with the evaluation of the debt instruments of both parties.

Administrator Olympic Peninsula Kidney Center (Bremerton, WA)

HISTORY AND BACKGROUND

Olympic Peninsula Kidney Center (OPKC) is a community based, 501(c)3 non-profit dialysis organization established in 1980. Our mission is to provide high quality dialysis care for kidney patients in Kitsap and Jefferson counties on the Olympic Peninsula of Washington State.

POSITION OVERVIEW

The Administrator is responsible for ensuring the effective management of the OPKC facilities and provision of all dialysis services with twenty-four hour responsibility and accountability for dialysis operations. This responsibility includes oversight of staffing, scheduling, personnel performance appraisal and discipline, development and administration of fiscal budget, coordination and implementation of all patient care policies, safety and security of the building, grounds and equipment, support to Board of Directors and on-going collaboration with Medical Directors and medical staff.

QUALIFICATIONS

Education - BS or BA degree in healthcare related field. Masters degree in Business Administration, Health Care Administration or related fields preferred. May substitute relevant experience for degree requirement. Organizational management – At least five years of senior management experience. Dialysis experience preferred. Nonprofit experience a plus. Experience reporting to and working with Boards and committees. Demonstrated experience in dialysis operations management. Communication skills – verbal and written. Facility with Microsoft Office products, email and Internet usage.

APPLICATION PROCESS

To apply, please submit your resume and cover letter describing your interest and qualifications to katrina.russell@dcgseattle.com. You may send a hardcopy resume to Olympic Peninsula Kidney Center, attn: Katrina Russell, 2613 Wheaton Way Bremerton WA, 98310. All applications will be kept in strict confidence.

Executive Director, Programs for SPD (Orange, CA)

CalOptima is a public agency that administers health insurance programs for children, low-income families, seniors, and persons with disabilities in Orange County. CalOptima is Orange County's second largest health insurer overall and largest insurer of children.

This position will lead operations for CalOptima's current programs for SPD and dual eligible members, and develop strategies to take them to the next level of program integration and enhancement. The Executive Director will develop innovative approaches to expand current programs and develop new initiatives to complement them.

Candidates should have 10+ years of related experience, including supervisory experience. Bachelor's degree in a related field is required. Master's degree in Health Administration, Public Health, or other related degree preferred. Candidates should also have extensive experience working at an executive level in a managed care environment, with a successful track record managing home and community based Medicaid (Medi-Cal) services; experience in new program development for vulnerable populations, including strategic planning for a start-up program and implementing the program; and have significant leadership skills, communication skills, strategic thinking and proven ability to build strong interpersonal relationships. Experience in a government or public environment preferred.

Please apply online at: www.caloptima.org
CalOptima is an Equal Opportunity Employer

Director over Case Management and Utilization Review (San Jose, CA)

EK Health Services is currently seeking a Director level employee to oversee the Case Management and Utilization Review departments for the company. A Nurse or other Medical professional with business acumen is welcomed but not required for this position. Workers Comp knowledge & experience preferred, but also not required. Qualifications: BS degree required; MS / MBA Degree in related field preferred. Valid California Drivers license in good standing. 8-10 years of management experience, exceptional leadership and analytical abilities required. Experience in the insurance, workers compensation or related healthcare required. Strong interpersonal and communication skills; conflict resolution and mediation skills. Ability to foster a collaborative work environment. Must be self-directed and motivated; capable of managing operations independently on a day-to-day basis.

EK Health Services has built a reputation for superior, goal-oriented Workers' Compensation case management and utilization review services. Our emphasis on medical excellence, superior service, impartial reporting and case resolution is the driving force behind our consistent annual growth.

If interested, please submit a resume to Jenna Schrader at jschrader@ekhealth.com. Thank you.

Founded in 1936, The Vancouver Clinic is a multi-specialty clinic located in Vancouver Washington, just north of Portland Oregon. The Clinic is a privately held, physician-owned clinic, with over 700 staff members and 190 providers. The Clinic is one of the region's principal health care providers, offering extensive services to our patients. We are currently seeking the following key positions.

Clinic Manager

We are looking for an energetic, experienced professional to lead a team of staff providing compassionate medical care. Must have excellent communication and problem solving skills. The manager will work through supervisory staff to oversee the daily operations of specialty departments such as ENT, Orthopedics, Podiatry, Surgery, urology and our Special Procedures Suite. The successful candidate will have approximately 5 years of previous medical experience, preferably in an ambulatory care setting. Prefer those with a Bachelors degree or equivalent combination of education and experience.

Clinic Supervisor

We are looking for an experienced clinic supervisor with the ability to mentor staff and help them flourish. You will provide supervision of clinical and office staff, facilitate staff and patient workflow, and control expenditures. Requires demonstrated ability to interview, select, train, and develop qualified staff. Must be comfortable in a fast-paced environment, detail oriented, and self-directed. The successful candidate will have a min of 2 years supervisory experience in a medical setting.

RN Supervisor - Nurse Advise

We are looking for a customer-service oriented RN with supervisory experience. Will be responsible for the daily supervision of advice nurse staff, assure compliance with all safety and regulatory bodies, train and develop nurse advice staff, and establish, implement, maintain and evaluate/improve patient care and quality service standards.

To apply for any of these positions visit www.tvc.org or call 360-397-3273 for information.
